

TRACKIFY

FLEET INTELLIGENCE & VEHICLE SECURITY

A comprehensive product capabilities and administrative operations guide. Exploring real-time GPS tracking, security geofencing, active warranty protections, user help systems, and device configurations.

Introduction & Core Features

Trackify is a state-of-the-art vehicle management and tracking ecosystem designed to deliver peace of mind, operational security, and extensive analytical insights for individual owners and commercial fleet managers alike. By combining robust hardware tracking units with an intuitive mobile application and a centralized web dashboard, Trackify bridges the gap between hardware tracking capabilities and modern cloud analytics.

Real-Time GPS Tracking

Continuous tracking with precision location updates. Available at standard 5-second intervals, or premium 1-second real-time tracking for instantaneous status updates.

Smart Geofencing Guard

Define circular safe-zones (Home, Office, Parking) on the map. Get instant notifications, email alerts, or SMS warnings whenever a vehicle enters or exits a predefined zone.

Anti-Theft & Towing Alerts

Activate "Safe Parking" to secure the vehicle. Instant vibration, motion, and ignition detection alerts are sent immediately if unauthorized movements occur.

Diagnostics & Maintenance

Monitors internal device voltage, vehicle battery levels, and notifies users when power drops or when the device goes into sleep mode to conserve vehicle battery.

Hardware & Cloud Integration

Trackify uses cellular-enabled telematics hardware with internal backup batteries. The device transmits location changes, speed thresholds, and diagnostics packets directly to a highly-available MQTT/HTTP ingestion cluster. The microservices process geofence boundaries and behavior statistics, routing immediate push updates to users.

The system handles network disconnection gracefully by caching tracking data locally on the hardware device storage, uploading accumulated logs immediately upon cellular reconnection to avoid data gaps.

Mobile Dashboard Experience

The Trackify mobile dashboard serves as the central control room for personal vehicles. Users receive instant visual confirmations of vehicle metrics, security states, and interactive diagnostics cards.

Dashboard Overview Widgets

Displays dynamic state information including ignition (Inactive/Active), time of last report, current fuel type, and expiration countdown banners.

Today's Summary Panel

Tracks daily riding statistics including total distance traveled, current average velocity, and active ride duration.

Quick Action Navigation Grid

Reusable action grids routing users directly to Geofencing setup, ReachMe Stickers, Fuel Logs, Expense Trackers, and Service Logs.

Promotional Banner Manager

Contextual notifications assisting users to upgrade to premium tiers (e.g. Plus) to activate advanced capabilities.

Real-Time Mobile Mapping & Telemetry

The Live Map interface matches GPS data streams with mapping overlays, letting users watch their vehicle move smoothly in real-time.

Live Velocity & Direction

Instantaneous speed calculations refreshed every second (Plus) or five seconds (Lite), complete with vector movement arrows.

Power and Diagnostic Monitors

Direct readings of the device's internal backup battery and the vehicle's battery voltage levels to ensure hardware health.

Ignition & Sleep State Tickers

Logs the exact elapsed duration since the vehicle's engine was shut down (e.g. "Parked since 1:30 PM") and detects low-power hibernation states.

Telemetry computations filter out mapping drift. This ensures coordinate sequences align perfectly with roads, avoiding incorrect geofence triggers when the vehicle is static.

Admin Console & Geofencing Guards

The Web Administration Panel provides fleet managers with unified operations screens. Managers can control security settings, geofences, and coordinate histories for hundreds of vehicles simultaneously.

Geofence Guard Mechanics

Managers draw custom circular perimeters centered at critical facilities (Home, Office, Parking). The system cross-references vehicle GPS coordinate streams against these radii. If a boundary is crossed, the server sends real-time push alerts, emails, and SMS updates.

Route Playback Telemetry

The route playback module lets admins replay any historical trip. Admins can control playback speed (1x, 2x, 4x) to analyze driver behaviors, check speed limits, verify route deviations, and review fuel usage indicators.

Journey Logs & Ride History Audits

Trackify automatically aggregates telemetry packets into separate trip logs. This simplifies route monitoring and expense claims for drivers and managers.

Interactive Route Visualizer

Every ride page maps the route with color-coded alerts showing speed violations, sharp cornering, or harsh brakes.

Trip Metadata Metrics

Log start and end timestamps, exact trip durations, total distance traveled, and precise starting/ending address strings.

Performance Records

Records average velocity and peak top speeds clocked during each trip to evaluate driver behaviors.

Search & Filtering

Allows users to search and filter through historical records using simple date selectors, vehicle profiles, and keyword inputs.

Riding Behavior & Diagnostic Analytics

The Statistics panel evaluates telemetry histories to compile behavior scores and diagnostic breakdowns.

Riding Behavior Index

Uses acceleration, cornering, and braking patterns to calculate an overall driver safety score (e.g. "100% Excellent").

Fuel Efficiency Logs

Tracks approximate fuel consumption (Litre) and total fuel cost (₹) calculated using configureable mileage factors (Km/L).

Historical Performance Graphs

Interactive timelines showing distance traveled and riding durations, helping fleet managers evaluate vehicle utilization.

Regular analytics reports help identify driver training needs and lower vehicle wear and tear. This helps extend tire lifetimes and reduces total fuel costs.

My Garage & Vehicle Registry

Trackify manages all your vehicles in one place. The Garage screen acts as the primary registry where users organize their vehicle profiles.

Multi-Vehicle Registry

Consolidates all vehicle assets (such as Hero MotoCorp Splendor Plus, Maruti Suzuki Swift, and Ola Electric S1 Pro) in an interactive card grid.

Dynamic SIM Status Tickers

Monitors SIM card data expiration dates and active connectivity signals to warn users of pending recharges before data cutoffs.

Easy Pairing Workflows

Allows quick pairing of newly purchased tracking devices to a vehicle using quick barcode scanning or manual IMEI registration.

The Garage page keeps tracking systems organized for fleet operations. You can switch between profiles with one tap, giving you immediate control over your entire fleet.

Device Warranty Extensions

Protect your investment. Trackify makes it easy to purchase extended warranties for your hardware tracking devices to prevent hardware failure costs.

Extend Warranty at ₹365/Year

Get full coverage for just ₹1 per day. Extends standard warranty protections for 365 days with instant digital confirmation.

Guaranteed Hardware Replacements

Covers complete device replacements for hardware glitches, network modem failures, or power system errors.

Significant Repair Savings

Saves up to ₹1,200 in hardware repair charges. Includes priority support and diagnostic testing services.

The warranty system is linked directly to your hardware's unique identifier. This ensures quick claims without needing paper invoices or manual registry reviews.

Trackify Plus Membership

Upgrade to Trackify Plus to unlock advanced capabilities for your tracking hardware, giving you elite level telemetry and analytics.

1-Second Live Tracking Refresh

Reduces update intervals to 1-second. Ensures smooth vehicle tracking overlays on the live map.

Advanced Security & Anti-Theft Call Alerts

Receive immediate automated phone calls the moment your vehicle moves or registers a vibration outside scheduled hours.

Detailed Speed & Behavior Analytics

Unlocks top speed tracking across all dates and granular acceleration/braking analysis models.

Unlimited Geofence Configurations

Create unlimited custom circular perimeter zones to monitor entries and exits across your entire fleet.

Help & Suggestions Support Desk

A built-in Support Desk ensures user requests are processed quickly, helping resolve hardware or mapping questions.

In-App Support Tickets

Submit technical issues directly linked to a specific vehicle, complete with diagnostic log packages sent to admins.

WhatsApp Support Integration

Get instant support from our help desk with one-tap WhatsApp integration.

Direct Callback Scheduling

Request callback slots directly in the app. An agent will call back at a time that works for you.

User Suggestion Modules

Submit feedback or request features directly. Helps shape the future updates of the Trackify application.

Fleet Recharge Plans & Capabilities

SIM Data & Subscription Packages

Users purchase SIM recharges directly within the mobile application. The ****Super Combo Plan**** (₹1,355 for 12 months) bundles data plans, extended warranties, and Plus memberships. Alternative packages include 12 Months (₹1,186), 6 Months (₹999), and 3 Months (₹599) plans.

Subscription Feature Matrix

Telemetry Feature	Lite Plan	Pro Plan	Plus Tier
Refresh Interval	5s	1s	1s
Warranty Coverage	Optional	Optional	Included
Anti-Theft Calls	×	✓	✓
Engine Lock Control	×	✓	✓
Geofence Limits	3 Zones	Unlimited	Unlimited
